

# Workflow Assistant

(2024-03-28)

## Motivation

The workflow definition requires definitions of:

- Dictionaries
- Downloadable Resources
- Electronic forms
- Workflow activities

The Workflow Assistant provides the capability to check the existence of definitions in one screen. It is expected that this will allow defining a workflow configuration with significantly less labor time and effort.

The current release introduces the first iteration of the Workflow Assistant – Electronic forms definitions.

## The screen

The screen below indicated that the electronic forms for this workflow are defined completely. The indicator is the green color of the expandable section (3).

*Figure 2 All forms for workflow in one place*

The list above includes all forms that should be defined for application and activities. Green marks in the right column mean that configurations of the forms exist.

The links in the right column are for the next iteration and don't work yet.
